

IKOMS detail®

Liquid one-component polymer-based coating
for complex roof details.
Solvent free.

IKO MS Detail is a revolutionary MS polymer-based waterproofing coating.

The product is extremely elastic, meaning it is suited for the most diverse and difficult to reach applications, such as complex roof details, gutters, chimneys, outlets, etc.

Environmentally-friendly because solvent-free

IKO MS Detail does not contain solvents. It is odourless and fire-resistant.

Flame-free application, without bonding primer on most substrates.

IKO MS Detail is a ready-to-use, single-component system, which can be applied on virtually **any substrate**. The product can be applied in a single coat with a brush, roller or spatula, without the need for a membrane reinforcement in most situations. In critical zones, a glass-fibre reinforced membrane should be applied between two layers of IKO MS Detail. Please consult the Technical Manual for detailed application instructions.

Durable waterproofing performance

IKO MS Detail contains high-quality polymers, which have long-term resistance against UV degradation. As a result of the lasting elasticity, early ageing is excluded. The product ensures permanent, reliable waterproofing, even in the most extreme conditions.

Time-saving and easy to use

IKO MS Detail can be quickly and easily applied to horizontal and vertical substrates. Professional finishing also takes less time, as there is no need for bonding primer or membrane reinforcement on most substrates. The product can be used for almost 2 hours after opening (at 25°C) and has a shelf-life of at least one year in sealed packaging.
