# Project Profile

## Commercial/Industrial Building

LACHINE, QC

### The Project

This IKO commercial roofing project included the installation of a dependable retrofit IKO Modified Bitumen Roofing System with an IKO Torchflex™ TP-250-Cap Sheet on this 1,858 sq. m. (20,000 sq. ft.) excavating business in Montreal.

### The Challenge

IKO was challenged with delivering a quick application and, at the same time, a highly dependable roofing membrane and cap sheet. The system offers a quick and economical alternative with two layers of mod bit membrane, while implementing both a base and cap sheet.

### The Solution

The IKO Fast-N-Weld™ Roofing System was selected for this project as a dependable roofing system with an established track record of reliability. In the Fast-N-Weld System, the base sheet is mechanically attached directly to the insulation, providing a quicker application and making a cover board optional.

Mod bit continues to be a prominent roof membrane choice throughout the Quebec province. This Fast-N-Weld System is a lightweight, but heavy-duty system, which also offers outstanding wind uplift ratings. This project features a small functional rooftop terrace as well.
